# **AICP — The AI Control Platform**

Govern every AI request through one controlled path.

AICP is Veevra's AI Control Platform: one governed platform to build, operate and control AI models, agents and knowledge across your organization. Requests are routed, grounded in your own knowledge, checked against the policies you set, and recorded — so AI becomes something you can adopt with confidence.

Illustrative overview · September 2026 · [veevra.com](https://veevra.com)

## What AICP is

AICP sits above the systems you already run and gives them one governed entry point for AI. Inside it, routing, policies, knowledge, models, agents, document intelligence and audit are building blocks of one platform rather than separate tools you have to integrate. Every experience built on AICP inherits the same governance.

## Two editions

### **AICP Sovereign — customer-controlled**

Deploy in the environment you choose (on-premises, private cloud or air-gapped) and keep full control of where AI runs and where data lives.

### **AICP Enterprise — Veevra-operated (SaaS)**

Subscribe to governed AI capabilities without running the platform yourself. Veevra runs it; it also powers V360 for individuals.

## **Runs where your data must live**

Cloud, private cloud, on-premises or fully air-gapped — wherever your data must live. Your models, data and control stay yours.

## **Governed, recorded, optional**

AI is governed by the policies you configure and recorded for review — and it stays optional across the portfolio, never on by default. You approve the models; AICP grounds answers in your knowledge and keeps an event record of every step.

## **Where AICP fits**

AICP is the control layer beneath the workspaces and the optional AI enhancement inside every operational family.
