

VEEVRA

COMPANY PROFILE

Veevra

Enterprise intelligence — governed AI and operational software for enterprise and government.

Veevra builds intelligent, secure and scalable digital platforms that help enterprises and governments connect AI to the systems they already run — with centralized governance and control, and without replacing what works.

Illustrative overview · September 2026 · veevra.com

Who we are

Veevra is an enterprise-intelligence company. We bring AI and operational software together under one control model, so organizations can modernize how they work while keeping data, decisions and AI firmly under their own governance. Our products are built for the realities of regulated sectors: identity, records, correspondence, workflow, knowledge and performance, with AI added only where it earns its place.

What we build

AICP — the AI Control Platform

One governed path for every AI request. Two editions: AICP Sovereign (you deploy and control) and AICP Enterprise (Veevra runs it as a service).

V-Workspaces

AI-empowered applications and workspaces that run on AICP. V360 is the confirmed workspace, available today.

Five operational families

V-Core, V-Flow, V-Manage, V-Grow and V-Lead — 15 capabilities across identity, workflow, documents, knowledge and performance.

Our approach

- Control-first — AI is governed, recorded and optional. Nothing is on by default.
- Deploy where your data must live — cloud, private cloud, on-premises or fully air-gapped.
- Modular — every product is usable on its own; add AI, or other families, when you choose.
- Grounded — AI answers are grounded in your own knowledge and routed only to models you approve.

Talk to us

Tell us your sector and what you want to achieve, and we will map the platform to your systems, sector and constraints.
