PORTFOLIO CATALOGUE

The Veevra Portfolio

One governed platform, adopted your way.

The Veevra portfolio spans the AI Control Platform, AI-empowered workspaces, and five operational product families. Start with one capability or the whole platform — everything shares one governance model and deploys where your data must live.

Illustrative overview · September 2026 · veevra.com

AI Control Platform (AICP)

The governed core for AI. AICP Sovereign is the customer-controlled edition you deploy and run; AICP Enterprise is the same governed capability delivered by Veeva as software-as-a-service. AICP Enterprise powers V360 for individuals and gives enterprises one place to build and govern their own AI.

AICP editions →

AI-empowered workspaces

V-Workspaces is the category of governed, AI-empowered applications that run on AICP. V360 is the confirmed workspace, available today: upload a document, ask a question, and get an executive-ready result in context — with governance built in.

V-Workspaces & V360 →

Five operational families

15 capabilities across five families. Each family is independent; each capability is usable on its own.

V-Core — Identity, Security & Insight

Identity & access, and analytics & insight.

V-Flow — Automation & Workflow

Visual workflow, dynamic forms and process automation.

V-Manage — Documents & Operations

Documents, capture, records, correspondence, meetings, tasks and audit.

V-Grow — Knowledge & People

Knowledge, learning and skills.

V-Lead — Performance & Strategy

Performance scorecards and strategy-to-execution.

How adoption works

Explore the platform, evaluate it against your systems and sector, agree scope and terms, then deploy in the environment you choose. Add AI, or further families, at your own pace.
