

VEEVRA

PRODUCT FAMILY

V-Core

Identity, Security & Insight

V-Core is where trust begins: the identity, access and analytics family that secures who gets in and gives leaders a live view of what is happening.

Illustrative overview · September 2026 · veevra.com

Capabilities in V-Core

V-Core brings together 2 operational capabilities, each usable on its own or together.

Identity & Access

SSO, adaptive MFA and role/attribute-based access control, with optional AI threat detection.

Analytics & Insight

Centralized analytics, interactive dashboards and a reporting engine across the systems you connect.

How it works together

Every family is an independent operational product you can adopt on its own. It works with V-Core for identity and access, and AI is an optional enhancement, governed through AICP when you choose to use it.

Deployment

Cloud, private cloud, on-premises or fully air-gapped — wherever your data must live. Your models, data and control stay yours.

Explore & get in touch

See the capabilities in detail, or ask us to map them to your systems and sector.
