WORKSPACES

V-Workspaces & V360

Where people meet governed AI, in context.

V-Workspaces is the category of governed, AI-empowered applications and workspaces that run on the AICP edition you choose. They put AI into the flow of real work — not as a separate tool — with governance built in.

Illustrative overview · September 2026 · veevra.com

The workspaces category

A workspace is where a person actually does the work: reading a document, asking a question, drafting a response, reviewing a decision. V-Workspaces bring governed AI into that moment, running on AICP so every AI action is routed, grounded and recorded.

V360 — available today

V360 is the confirmed workspace. Upload a document, ask a question in your own words, and get an executive-ready result in context. Because V360 runs on AICP Enterprise, the same governance and control apply to every interaction.

V360 →

How it works

Workspaces run on AICP, so every AI action is governed and recorded. People work with AI where their tasks already live, and the organization keeps one control model across everything.

Deployment

Available as a subscription for individuals and enterprises through AICP Enterprise, and — with AICP Sovereign — in the environment you control.
